# Kolnz Cashier App

**UX Case Study**

**Tools:** Figma, Miro, Whimsical, and Protocol Hologram
**My Role:** Product designer
**Skills:** Research, Wireframing, Interaction design, Prototyping, User Flows, UI Design

## Overview

There are many **appropriate systems** in restaurants today, so there, has declined in systems or popularity today.

## Problems:

After some short problem statement based on **Social Grubby** & interviews users and restaurants, we are solving **3 key important customers**:

- Restaurants face **time-taking tedious** task during their rush hrs **challenging**.
- Customers face **difficulty** in ordering food **due to** long **waiting** & **tedious** ordering **hassles** and **inability to get accurate** ordering.

Here is strategy for **cashier app** for **Android POS** to give the cashier a seamless experience of ordering and managing orders.

## Understanding:

Understanding **user needs** and solving POS problem/design by effective design necessary is executed by the 5D. It involves understanding the information users need for performing their tasks and how they want to organize, structure, and present that information.

**Here are the stages I did:**
**Stage 1 – Understanding User (Research & Analytics)**
1. Competitive Analysis
2. Interviews with restaurants
3. Interviews with customers

**Stage 2 – Technical Assistance**
1. Wireframes
2. Prototype & Iterations

**Stage 3 – Design and Prototype**
1. UI design
2. Prototype

**Stage 4 – Delivery**
1. Design Handoff
2. Post Launch Support

### Desk Research:

Desk research is a method that requires the use of secondary data that have been collected and published in the past. The main advantages of using desk research are that it is inexpensive and can be carried out quickly.

**Traditional methods**

- Online **order** Modern or online **ordering** systems have **reduced** the **need** for **staff** to **take orders** from customers in person or over the phone. However, there are still some instances where the ordering process can be tedious for the staff. Here are some common challenges faced by staff when taking online orders:

**Android POS benefits**

With the coming of Android POS systems all over the world, restaurants have been able to keep up with up to date POS systems. Android POS systems have many benefits to restaurants. Here are some of the benefits of Android POS systems and the benefits.

- **No internet** or **inconsistent** internet connection can make ordering **tedious** task.
- **Limited menu** options.
- **Time-consuming**
- **Difficulty** in **managing** complex orders.
- Minimum **savings** and **rewards tracking**.
- **Inaccurate** order **taking**.
- Inability to **handle** multiple orders at once.
- Inability to **provide** real-time **updates** on order status.

- **Reduced** the **need** for **staff** and **increased** order **accuracy**.
- **Time-saving**
- **Easy** to **use** and **manage**.
- **Affordable** and **flexible** pricing options.
- Minimum **savings** and **rewards tracking**.
- **Increased** order **accuracy**.
- **Increased** the **speed** of **service**.
- **Improved** customer **satisfaction**.

### Interviews:

Unstructured **User Interviews** with different users across which are **Secondary, Homemade, etc.** and **Pre-Pre Delivery Phase.**

**Interview goals** in order to learn more about their cashier apps and how they work, **Interview goals** in order to learn more about their cashier apps and how they work, **Interview goals** in order to learn more about their cashier apps and how they work, **
